

ENVIRONMENTAL AND ENERGY POLICY

At MAUSER we strive to offer our customers the most sustainable packaging solutions possible. We are aware that using natural resources responsibly in our own operations is of high importance to achieve that goal. Efficiency in conserving material and energy, coupled with innovation in processes and products, are core elements of our business philosophy.

Employee awareness and training

Environmental compliance and awareness of environmental issues are essential parts of our day-to-day operations. Appropriate management systems and clear definitions on environmental responsibilities provide effective guidance to our employees. Our employees are regularly informed on our group's environmental activities and performance and are trained on relevant issues.

Minimizing the environmental impact of our activities

All our operations respect applicable environmental laws and regulations. We take necessary actions to prevent accidents and aim to avoid any damage to the environment. The efficient use of resources combined with the use of the best available technology drives continuously reduced consumption of raw materials and supplies. Energy and resource efficiency are key criteria with any operational investment we take. We expect our suppliers to meet our environmental standards and to address the most efficient use of natural resources in their operations as well.

Management commitment

The management is fully committed to the principles and procedures as defined in our companies Integrated Management Manual. The document conforms to the applicable versions of the ISO standards 9001, 14001 and 50001 and is subject to an annual review of adequacy and appropriateness of the procedures defined in it.

Environmental awareness and efficient use of natural resources lead to what we are striving for: Excellence in Industrial Packaging!
