Transport Container Range

DANIELS® Transport Containers are a safe and durable range of containers, designed to meet your transportation needs within healthcare settings, between sites, and in the community.

Popular with community nurses, medical couriers and clinicians, the range consists of three cost-effective, reusable containers which are easy to use and help to ensure compliance with waste transportation legislation, UN standards and packing regulations.

DANIELS® Community Nursing Container

This is an ideal container for community healthcare professionals who need a suitable container to hold small quantities of clinical waste, sharps and 'dirty' medical instruments, and items used in the course of their everyday roles. The dividers enable the container to hold both small sharps containers and/or small cytotoxic/cytostatic containers which will fit into the compartments at either end, assisting with the segregation of waste as required by the 'Safe Management of Healthcare Waste' guidance issued by the Department of Health (2006).

Product Benefits

- ▶ Two removable dividing inserts creating up to three separate compartments.
- ▶ Fully removable lid secured by four easily operated clips ready for transportation.
- ▶ In car bracket provided with the container for secure storage in a car boot or footwell.
- ▶ UN performance tested to meet all the requirements of Packaging Instruction 621 and suitable for clinical waste assigned to UN3291.
- ▶ Manufacturing standards ISO 9001.

Product Specifications

- ▶ Nominal capacity: 7 litres
- ▶ Size (incl. lid) H420 mm x W360 mm x D130 mm
- ▶ Aperture Opening: 146 mm x 324 mm
- ▶ Carton of 10
- ▶ Daniels product code: DD853
- ▶ In car bracket code: DD507
- ▶ NHS Supply Chain code: FSL262
- ▶ Material: Polypropylene

DANIELS® Diagnostic Specimen Containers

This container is ideal as the outer packaging when transporting samples or specimens. The yellow label indicates the contents as Biological Substance - Category B.

Place the primary receptacle and the secondary packaging, (plastic bag), inside the container for a safe and effective means of transportation on the public highway. This works equally well for healthcare professionals in the community or hospital staff transporting samples to the laboratory. By utilising the same type of container in both hospital and community settings avoids any confusion of different practices.

The 30 litre container is designed for larger collections from clinics, surgeries ect. to be carried on the public highway to the local hospital or laboratory for analysis. This is ideal for transport departments or carriers offering this type of collection service.

Product Benefits

- ▶ Container can be kept open to fill and then closed by pushing down on the lid ready for transportation
- ▶ Compliant with Packaging Instruction 650 and suitable for diagnostic specimens assigned to UN3373.
- ▶ The 7L is also tested to UN drop test requirements.
- ▶ Manufacturing standards ISO 9001.

DANIELS® Diagnostic Specimen Container 7

Product Specifications 7L

- ▶ Nominal capacity: 7 litres
- ▶ Size (incl. lid) H420 mm x W360 mm x D130 mm
- ▶ Aperture Opening: 146 mm x 324 mm
- ▶ Carton of 10
- ▶ Daniels product code: DD851
- ▶ In car bracket code: DD5507
- ▶ NHS Supply Chain code: KCP139
- ▶ Material: Polypropylene

DANIELS® Diagnostic Specimen Container 30

Product Specifications 30L

- ▶ Nominal capacity: 30 litres
- ▶ Size (incl. lid) H355 mm x W425 mm x D305 mm
- ▶ Aperture Opening: 350 mm x 266 mm
- ▶ Carton of 5
- ▶ Daniels product code: DD854
- ▶ NHS Supply Chain code: KCP140
- ▶ Material: Polypropylene
